No part of this publication may be reproduced or transmitted in any form or by any means, electronic or mechanical, including photocopy, recording, or any information storage and retrieval system, without permission in writing from the copyright owner.

The appearance of the code at the bottom of the first page of an article in this journal indicates the copyright owner's consent that copies of the article may be made for personal or internal use, or for the personal or internal use of specific clients. This consent is given on the condition, however, that the copier pay the stated per copy fee through the Copyright Clearance Center, Inc. (21 Congress Street, Salem, Massachusetts 01970), for copying beyond that permitted by Sections 107 or 108 of the U. S. Copyright Law. This consent does not extend to other kinds of copying, such as copying for general distribution, for advertising or promotional purposes, for creating new collective works, or for resale. Copy fees for pre-1982 articles are the same as those shown for current articles.

MADE IN THE UNITED STATES OF AMERICA

CONTENTS OF VOLUME 125

NUMBER 1, SEPTEMBER 1, 1982

Purification of T4 RNA Ligase by Dextran Blue-Sepharose 4B Affinity Chromatography *Hu Mei-hao, Wang Ai, and Hua Hui-fen* 1

The Determination of Purine Levels in Human and Mouse Plasma *Peter Slowiaczek and M. H. N. Tattersall* 6

Sensitive and Inexpensive Dual-Wavelength Reflection Spectrophotometry Using Interference Filters *R. B. Duckrow, J. C. LaManna, and M. Rosenthal* 13

A New High-Performance Liquid Chromatography Assay for Glutamine Synthetase and Glutamate Synthase in Plant Tissues *Francis Martin, Akira Suzuki, and Bertrand Hirel* 24

Fluorescent/Ultraviolet Absorbing Ester Derivative Formation and Analysis of Eicosanoids by High-Pressure Liquid Chromatography *W. David Watkins and Myron B. Peterson* 30

Luteinizing Hormone-Releasing Hormone Peptidase Activities in the Female Rat: Characterization by an Assay Based on High-Performance Liquid Chromatography *J. P. Advis, J. E. Krause, and J. F. McKelvy* 41

Gas-Liquid Chromatography and Enzymatic Determination of Alanopine and Strombine in Tissues of Marine Invertebrates *Kenneth B. Storey, Daniel C. Miller, William C. Plaxton, and Janet M. Storey* 50

Affinity Chromatography of Hyaluronate on Glutaraldehyde-Fixed SV-3T3 Cells *Ronald L. Goldberg, Charles B. Underhill, and Bryan P. Toole* 59

Separation of β,γ-Bidentate Cr · ATP Diastereomers by Reverse-Phase High-Performance Liquid Chromatography *Kenneth J. Gruys and Sheldon M. Schuster* 66

In Vivo Quantitation of *N*-3 and *N*-7 Alkylpurines Induced by Alkylnitrosoureas *D. N. Mhaskar, J. M. Raber, and S. M. D'Ambrosio* 74

SV40 RNA: Filter Hybridization for Rapid Isolation and Characterization of Rare RNAs *Theodore Gurney, Jr., Dean K. Sorenson, Elizabeth G. Gurney, and Norma M. Wills* 80

A Simple Method for Detecting Drug Effects on the DNA of Mammalian Cells *Brendan Marshall and Ray K. Ralph* 91

Experimentally Improved Reliability of Ultrasensitive Silver Staining of Protein in Polyacrylamide Gels *Margret Eschenbruch and Robert R. Bürk* 96

A Simple Method for Plasma Membrane Isolation from Embryonic Tissue Using Positively Charged Microcarriers *J. Thomas Wright, William A. Elmer, and Ann T. Dunlop* 100

Preparation of Myofibrils from Bovine m. semimembranosus by Density Gradient Centrifugation *Ole Harbitz, Erik Slinde, Harald Kryvi, and Geir K. Totland* 105

Competitive Binding Assays for Riboflavin and Riboflavin-Binding Protein *Sharon E. Lotter, Mark S. Miller, Richard C. Bruch, and Harold B. White III* 110

Stability of *N*-Acyl Groups in Methylated $\alpha 2 \rightarrow 8$-Linked Oligosialosyl Chains toward Methanolysis. Analysis by Chemical Ionization–Mass Spectrometry
Sadako Inoue, Go Matsumura, and Yasuo Inoue 118
Rapid Electroelution of Nucleic Acids from Agarose and Acrylamide Gels
H. Peter Zassenhaus, Ronald A. Butow, and Yolanda P. Hannon 125
High-Sensitivity Peptide Mapping of Triosephosphate Isomerase: A Comparison of High-Performance Liquid Chromatography with Two-Dimensional Thin-Layer Methods *Bedii Oray, Minoo Jahani, and Robert W. Gracy* 131
Recovery of DNA Fragments from Gels by Transfer to DEAE-Paper in an Electrophoresis Chamber *David B. Danner* 139
Determination of Acetaminophen Metabolites in Urine by Liquid Chromatography/Electrochemistry *Marta Hamilton and Peter T. Kissinger* 143
Automated Proton Titrations of Pancreatic Phospholipase A_2
Gabriëlle M. Donné-Op den Kelder, Gerard H. de Haas, and Maarten R. Egmond 149
Resolution of Optical Isomers by Chiral High-Performance Liquid Chromatography: Separation of Dihydrodiols and Tetrahydrodiols of Benzo[*a*]pyrene and Benz[*a*]anthracene *Henri B. Weems and Shen K. Yang* 156
A Computerized Single-Beam Spectrophotometer: An Easy Setup
Werner Schmidt 162
The Use of Enzyme-Linked Immunosorbent Assays (ELISA) for the Determination of Triton X Nonionic Detergents *Siong I. Wie and Bruce D. Hammock* 168
Experimental Errors and Their Effect on Analyzing Circular Dichroism Spectra of Proteins *John P. Hennessey, Jr., and W. Curtis Johnson, Jr.* 177
(Na^+, K^+)-ATPase: A New Assay of Na^+-ATPase Reveals Covert Anti-Pump Antibodies *Dale B. Schenk, Richard Grosse, Mark H. Ellisman, Victoria Bradshaw, and Hyam L. Leffert* 189
Assay for Polyunsaturated Fatty Acids by Argentation–Thin-Layer Chromatography Using Commercial Thin-Layer Plates
Mitsushi Inomata, Fumimaro Takaku, Yoshitaka Nagai, and Masaki Saito 197
Variables in the High-Pressure Cation-Exchange Chromatography of Proteins
Charles A. Frolik, Linda L. Dart, and Michael B. Sporn 203
Application of High-Performance Liquid Chromatography to Competitive Labeling Studies: The Chemical Properties of Functional Groups of Glucagon
Stephen A. Cockle, Harvey Kaplan, Mary A. Hefford, and N. Martin Young 210
Purification by Reverse-Phase High-Performance Liquid Chromatography of an Epidermal Growth Factor-Dependent Transforming Growth Factor
Mario A. Anzano, Anita B. Roberts, Joseph M. Smith, Lois C. Lamb, and Michael B. Sporn 217

NUMBER 2, SEPTEMBER 15, 1982

Review. Flow Cytometry: Rapid Biochemical Analysis of Single Cells
Howard S. Kruth 225
The Nature of Big Plasma Somatostatin: Implications for the Measurement of Somatostatin-Like Immunoreactivity in Human Plasma
J. Michael Conlon, Myrtle Bridgeman, and K. George M. M. Alberti 243
High-Pressure Liquid Chromatography of Cobalamins and Cobalamin Analogs
Mitchell Binder, J. Fred Kolhouse, Kenneth C. Van Horne, and Robert H. Allen 253

The Determination of Acetaldehyde in Human Blood by the Perchloric Acid Precipitation Method: The Characterization and Elimination of Artefactual Acetaldehyde Formation
C. J. Peter Eriksson, Yasuhiko Mizoi, and Tatsushige Fukunaga 259
A Word of Caution: 1,4,5,6-Tetrahydronicotinamide Adenine Dinucleotide (Phosphate) Should Be Used with Care in Acidic and Neutral Media
G. Branlant, B. Eiler, and J. F. Biellmann 264
An Improved Method for Isolation of Mitochondria in High Yields from Normal, Ischemic, and Autolyzed Rat Hearts
Jane A. Idell-Wenger, Lee W. Grotyohann, and James R. Neely 269
Quantitative Determination of Tryptophanyl and Tyrosyl Residues of Proteins by Second-Derivative Fluorescence Spectroscopy
J. C. Garcia-Borron, J. Escribano, M. Jimenez, and J. L. Iborra 277
Rapid and Specific Assay of Collagen Glucosyltransferase with a Sepharose-Bound Substrate *Richard Reynertson, John Ford, and Lennart Rodén* 286
Purification of Bovine Plasma Amine Oxidase *P. Turini, S. Sabatini, O. Befani, F. Chimenti, C. Casanova, P. L. Riccio, and B. Mondovì* 294
The Spaghetti Overlay: Simultaneous Screening of Multiple Polyclonal and Monoclonal Antibodies by Immunoautoradiography *W. Steven Adair* 299
Computer-Controlled Direct Scanning Gel Chromatography System
Theodore J. Socolofsky, Gary A. Radke, and Lawrence C. Davis 307
Direct Scanning Active Enzyme Gel Chromatography with Halted Flow for Detecting Molecular Weight Heterogeneity of Active Enzymes
Lawrence C. Davis and G. A. Radke 315
A Radiometric Assay of Pyridoxamine (Pyridoxine) 5′-Phosphate Oxidase
LuAnn Langham, Barbara M. Garber, Daphne A. Roe, and Michael N. Kazarinoff 329
An Improved Method for Phenotyping of Alpha$_1$-Antitrypsin Variants Using Separator Isoelectric Focusing on Thin-Layer Agarose Gel
A. Rauf Qureshi and Hope H. Punnett 335
Further Purification of Epidermal Growth Factor by High-Performance Liquid Chromatography
Lynn M. Matrisian, Brent R. Larsen, Joanne S. Finch, and Bruce E. Magun 339
A Rapid and Specific Assay for N^{α}-Acetyltransferase Activity
H. P. C. Driessen, W. W. de Jong, G. I. Tesser, and H. Bloemendal 352
Affinity Electrophoresis: New Simple and General Methods of Preparation of Affinity Gels *Václav Hořejší, Marie Tichá, Pavel Tichý, and Antonín Holý* 358
Determination of Phenolic Benzo(*a*)pyrene Metabolites Formed by Human Hair Follicles *Math W. A. C. Hukkelhoven, Lisette W. M. Vromans, Alphons J. M. Vermorken, Cees B. van Diepen, and Hans Bloemendal* 370
Assay of Δ^1-Piperideine-2-carboxylate and Synthesis of L-[^{14}C]Pipecolate for DL-[^{14}C]Pipecolate *Yung-Feng Chang, A. K. Charles, and Robert B. Tilkin* 376
Preparative Size-Exclusion Chromatography of Human Serum Apolipoproteins Using an Analytical Liquid Chromatograph
C. Timothy Wehr, Robert L. Cunico, Gary S. Ott, and Virgie G. Shore 386
Use of Reverse-Phase High-Performance Liquid Chromatography in Structural Studies of Neurophysins, Photolabeled Derivatives, and Biosynthetic Precursors
David M. Abercrombie, Christopher J. Hough, Jonathan R. Seeman, Michael J. Brownstein, Harold Gainer, James T. Russell, and Irwin M. Chaiken 395

Purification of Radiolabeled and Native Polypeptides by Gel Permeation High-Performance Liquid Chromatography
C. Lazure, M. Dennis, J. Rochemont, N. G. Seidah, and M. Chrétien 406
Packed-Bed Reactor of Immobilized Bacterial Bioluminescence Enzymes: A Potential High-Sensitivity Detector for Automated Analyzers
Kalevi Kurkijärvi, Raimo Raunio, and Timo Korpela 415
A Unique Activity Assay for Carboxypeptidase A in Human Serum
Lynn M. Peterson, Barton Holmquist, and J. L. Bethune 420
A New Solid-State Reagent to Iodinate Proteins. I. Conditions for the Efficient Labeling of Antiserum *Mary Ann K. Markwell* 427
Interaction of Heparin with Antithrombin III and Platelet Factor 4: pH Dependence Demonstrated with a New Rocket Precipitin Electrophoretic Procedure
Herbert Wohl, John Hinkley, Lakshmy Krishnan, and Linda Weekly 433
Identification of Isoenzymes in Cholinesterase Preparations Using Kinetic Data of Organophosphate Inhibition
Jörg-Michael Chemnitius, Karl-Heinz Haselmeyer, and Ronald Zech 442

AUTHOR INDEX FOR VOLUME 125 455

The Subject Index for Volume 125 will appear in the December 1982 issue as part of a cumulative index for the year 1982.

INFORMATION FOR AUTHORS[1]

Analytical Biochemistry is an international journal that will publish original articles on methods of interest to the biochemical sciences and all fields that impinge on biochemical investigation. In addition to the expected techniques that apply to biochemical preparations and analysis, the following should be considered as within the scope of the journal:

— Cell and tissue culture techniques that are of general application.

— Sequencing and synthesis of nucleic acids; chemical mutagenesis.

— Purification methods for enzymes and other proteins when a high level of purity has been achieved.

— Immunochemical techniques, both analytical and preparative, if they are of general applicability by biochemists. Included are radioimmunoassays, but only if a unique approach is introduced rather than the determination of a substance not previously assayable.

— Pharmacological and toxicological research techniques that have a biochemical approach.

— Review articles dealing with timely topics. Although these are generally invited, unsolicited manuscripts will be considered.

Manuscripts are accepted for review with the understanding that the same work has not been and will not be published nor is presently submitted elsewhere, and that all persons listed as authors have given their approval for the submission of the paper; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Analytical Biochemistry* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

Address. Manuscripts should be submitted in quadruplicate to ***Analytical Biochemistry*, Editorial Office, Seventh Floor, 1250 Sixth Avenue, San Diego, California 92101.** In the case of rejected manuscripts, only one copy of the manuscript will be returned to the author.

Manuscripts should be concise and consistent in style, spelling, and use of abbreviations. In order to facilitate the processing of manuscripts, the journal now requests that at least four copies be submitted, each copy to include all figures (originals or glossy prints) and tables. The original copy must be typewritten, double-spaced, on one side of white bond paper, about 8½ × 11 inches in size, with one-inch margins on all sides. Each manuscript should have a separate title page noting title of article, authors' names (without degrees), a running title (not exceeding 35 letters and spaces), an abstract (50–150 words), and the address to which proof should be mailed. In creating a title for your paper, please omit words such as *novel, rapid, improved, simple, sensitive, efficient, convenient, new.* Each is felt to be redundant and actually slows down the reader who is scanning the article titles and wants to know more about the method itself. Please substitute informative words that will give readers a more complete idea of the usefulness of your paper with regard to the limitations of their equipment or sample type. For example, what *kind* of method are you describing? **Authors should indicate the following on the title page: (1) the appropriate subject category for listing in the Table of Contents; (2) six descriptive key words for computer-aided selection of reviewers.** These words will also be used in the preparation of the annual cumulative subject index for the journal. Please number all pages of the manuscript.

Text. The suggested organization of an article is: abstract; introductory statement; materials and general methods; results; discussion; acknowledgment; references. Some of these sections may be combined if the presentation is thereby made clearer or more effective. Although this is the general form, the journal will accept short papers of approximately two printed pages that are arranged without specific sections except for a short abstract.

Names of chemical or organic substances should follow the recommendations of the IUPAC–IUB Combined Commission on Biochemical Nomenclature (CBN) as published in the extended Information for Authors, appearing in the July 15, 1981 issue of this journal.

Authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of practice has been followed, a reference to the relevant standards should be given.

---

[1] An extended Information for Authors was published in the July 15, 1982 issue. Reprints are available from the Editorial Office. Authors should consult this Information for details on nomenclature, IUPAC–IUB rules and recommendations, and accepted abbreviations.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text; each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form ready for the engraver. A convenient size for drawings is 8½ × 11 inches (21 × 27.5 cm). Drawings should be made with India ink on tracing linen, smooth surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final engraving should be inked in black. Glossy prints properly prepared are acceptable.

Photographs must be kept to a minimum and should be glossy prints with strong contrasts; the magnification should be indicated by a scale where possible.

Tables should be typed on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. All tables should have descriptive headings, typed (double-spaced) above the table.

Footnotes should be designated in text by superscript numbers and listed on a separate sheet; in tables, by superscript letters and placed at the bottom of the page containing the table.

References to the literature should be cited in the text by Arabic numerals in parentheses and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in Chemical Abstracts' *Service Source Index* (1969 Edition). Please note style of capitalization and punctuation for journal articles and edited books in the following examples:

1. Jones, J. B., Dilworth, G. L., and Stadtman, T. C. (1979) *Arch. Biochem. Biophys.* **125,** 255–260.
2. Metzler, D. E. (1977) Biochemistry: The Chemical Reaction of Living Cells, p. 298, Academic Press, New York.
3. Harrington, W. F. (1979) *in* The Proteins (Neurath, H., and Hill, R. L., eds), Vol. 4, pp. 246–409, Academic Press, New York.

Proofs. Proofs will be sent to the authors with reprint order forms. Fifty reprints of each article are provided free of charge. Additional reprints may be ordered using the form provided.
